

Training Wheel Sandbox

Guided learning environment for community education support

What this is

An exploratory sandbox for a future supervised community-education support structure.
Not a program. Not a launch. Not a product.

Core commitments

- Community education only
- No clinical advice
- No patient interaction
- Adult supervision required
- Escalate uncertain situations

Structure

If this concept is pursued later, it would follow:

- Lightweight internal web dashboard
- Learning support tool as resource only — never sole guide
- Structured FAQ / scenario library
- Clear escalation guidance to adult supervisor
- Human adult supervision at all times

Boundaries

- **Not:** clinical training, certification program, workforce replacement, clinical pipeline
- **Not:** standalone advocacy authority, healthcare delivery, referral funnel
- **Not:** Discord-first community, online certification, monetized offering
- **Not:** representation of Contentnea, Yale, Duke, or any institution

Placeholder: Future FAQ section and learning support tool may appear here later — following governance and boundary rules defined in the main dashboard (E3).

Current governance approach

- Learning support tool may: clarify role boundaries, explain escalation rules, interpret general educational situations, reinforce not-a-clinician posture, suggest escalation to adult supervisor
- Learning support tool may not: give clinical advice, diagnose, interpret patient-specific information, approve referrals, act as independent supervisor, provide legal advice, or offer crisis counseling

Youth safety

- Guardian awareness required for minor participants
- Adult supervision always required
- No unsupervised patient-family interaction
- No PHI access

- No healthcare or institutional representation

Internal exploratory sandbox — not an active public program.
